

Taking Your Pet Abroad

Your pet will need:

Up to date routine vaccinations
Microchip
Rabies vaccination
Appropriate tapeworm treatment
Authorised EU Pet Passport
Approved travel route

WARWICK SOUTHAM KENILWORTH WELLESBOURNE STRATFORD

What is the PETS Scheme?

PETS (PETS Travel Scheme) was set up to allow cats, dogs & ferrets (over 3 months old) to visit certain countries, with a passport, without the need for quarantine on return provided they fulfil a series of requirements.

New legislation came into effect on 1st January 2012 which differentiates between EU passports and those required for non EU or unlisted countries.

Countries included in the Scheme

All EU and some listed non EU countries are included in the PETS Scheme. If you are travelling to countries outside the EU or non-listed countries your pet will need a different passport with further requirements to fulfil. You can find full details of participating countries from the PETS helpline.

Transport

Pets may travel on authorised routes by car, boat and by air. Routes & travel companies are regularly amended. You are advised to check all travel arrangements with your travel company **BEFORE** booking your return journey.

Some companies may require a private veterinary health statement in addition to your pet passport.

You must use a commercial sea or air carrier to transport your pet legally under this scheme. Privately owned boats / planes are not accepted.

Advice for Travel

Sea Travel - If you are travelling on a long ferry route it is recommended that you arrive at the port early for the best vehicle position. Also, travel overnight, when your pet is used to sleeping.

Car Travel - Again try to travel at night when your pet will hopefully sleep, and if you can, feed earlier in the day to avoid travel sickness and toileting. There are extremely effective treatments for travel sickness – please ask your vet.

Remember - pets can die in hot vehicles, so unless fully acclimatised, your pet is likely to overheat & suffer in temperatures of 25°C and over, even if just for a few minutes. Keep your vehicle well ventilated.

Air Travel - It is normal for handling charges to be covered in the pet travel ticket price but it may be a good idea to check with the airline first. No charges are made by DEFRA. Contact your airline for their specific requirements for pet travelling kennels and cages.

Your pet's health while abroad

Your pet may be exposed to serious diseases (other than Rabies) that do not occur in the UK. These may pose major risks to human health. Dogs are mainly at risk but cats can also be exposed.

The main diseases are:

1. **Leishmaniasis** - causes widespread organ damage & is transmitted by sandflies, commonly found in woodland. They can infect humans.
2. **Ehrlichiosis** - causes blood disorders and is transmitted by ticks. Some types can infect humans.
3. **Babesiosis** - a blood parasite largely found in warmer countries and is spread by ticks.
4. **Dirofilariasis** - dog heartworm. Widely seen across Europe & other countries & is transmitted by mosquitoes.

In order to prevent these diseases we recommend a package of measures:

- Treat dogs with **Advantix** every 2 weeks to prevent ticks & repel sandflies. **Do not** let cats come into contact with Advantix as it is very dangerous for them. Cats should be treated with **Frontline**.
- Treat with **Milbemax** wormer at least once, or monthly throughout the visit to prevent heartworm.
- Avoid walks at peak midge times (dawn & dusk).
- Check for ticks every day & remove them as soon as found using a proper tick removal hook. (The O'Tom hook recommended).

Before returning to the UK

Contact a vet in plenty of time before you return to the UK.

Your dog will need to be treated by a vet against **Tapeworms** with a product containing praziquantel (e.g. Droncit)

This must be done between 24 - 120 hours before your pet's scheduled arrival time in the UK.

Ensure the vet checks your pet's microchip number and completes the relevant sections of the passport entering the date and time of treatment.

NOTE: If when you arrive at the check-in point, less than 24 hrs have passed since tapeworm treatment, you will have to wait until the full 24 hrs have passed before travelling. If the treatment was carried out more than 120 hrs before you check in, you will have to have your pet treated again and recorded in the relevant documentation.

EU Pet Passport

Requirements

Routine Vaccination - Your pet must be up to date with all **annual vaccinations**.

Microchip – Your pet must have had permanent **microchip** implanted **BEFORE** vaccinating against rabies.

Rabies Vaccination - A booster is necessary every 3 years and must be completed on or before the date it is due for the passport to remain valid.

'Miss by a day and your pet can't go away'

NOTE - some countries may require more frequent rabies vaccination so check with your destination country.

Your pet cannot enter EU countries including the UK until a waiting period of 21 days after the date of the rabies vaccination has elapsed.

An EU Passport – This must be issued by an authorised Official Veterinarian and verifies the identity, microchip and vaccination of your pet. All Avonvale vets are certified to do this. The EU Pet Passport must accompany your pet when travelling. Annual vaccination and 3 yearly rabies vaccination **MUST** be maintained for the passport to remain valid. Your pet will be returned to the country of origin or placed in quarantine if documentation is not in order. **It is your responsibility to check this.**

Tapeworm Treatment (dogs only) - Your dog must be treated for tapeworms before they travel, between 1- 5 days (not less than 24 hours or longer than 120 hours) before re-entering the UK. This treatment must be verified by a veterinary surgeon and recorded on your pet's travel documents.

NOTE – if you are planning to take your pet to a non-EU or unlisted country please see the requirements overleaf as a rabies anti-body serum blood test will be required.

Travelling to and from non-EU or unlisted Countries

Dogs and cats being exported to countries outside the EU must comply with the import conditions of those countries. You are advised to find out what import requirements apply before you travel. Many countries require an Export Health Certificate and some an import licence. Other documents may also be required. Your pet can enter Croatia, Gibraltar, Norway, San Marino and Switzerland with an EU pet passport.

Pets returning from non EU passport countries will need to have documentation to show that they have completed a successful rabies anti-body serum blood test. The test must be completed at least 30 days after the rabies vaccination was given and 3 months must have elapsed between the blood test and arrival in the UK.

Some countries require your pet to have a rabies vaccination within a specified period before its arrival regardless of when your pet's booster is due.

Microchip	£28.00
(with discount if vaccinated at Avonvale)	(£21.00)
Rabies primary vaccination/booster	£59.95
Issue of EU PETS Passport	£79.95

Prices are subject to change; correct as of Dec 2015
